

## Phase 5: Apex development (Developer)

### Project Title: Student Success & Career Guidance Portal

#### ➤ 5.1 Trigger + Service + Test

##### 1. Create the Service Class (StudentCareerService)

- In Developer Console → File → New → Apex Class.
- Enter name: StudentCareerService.
- Code:

```
public with sharing class StudentCareerService {  
  
    public static void updateReadiness(Map<Id, Contact> newContactsMap) {  
        if (newContactsMap == null || newContactsMap.isEmpty()) return;  
  
        Set<Id> studentIds = new Set<Id>();  
        for(Contact c : newContactsMap.values()){  
            // adjust 'Student' to your actual RecordType DeveloperName  
            if (c.RecordTypeId != null &&  
                Schema.SObjectType.Contact.getRecordTypeInfosById()  
                .get(c.RecordTypeId)  
                .getDeveloperName() == 'Student') {  
                studentIds.add(c.Id);  
            }  
        }  
        if(studentIds.isEmpty()) return;  
  
        // Aggregate skills  
        Map<Id, Integer> skillCounts = new Map<Id, Integer>();  
        for (AggregateResult ar : [  
            SELECT Student__c studentId, COUNT(Id) cnt  
            FROM Student_Skill__c  
            WHERE Student__c IN :studentIds  
            GROUP BY Student__c  
        ]){  
            skillCounts.put((Id) ar.get('studentId'), (Integer) ar.get('cnt'));  
        }  
  
        // Calculate readiness
```

```

List<Contact> updates = new List<Contact>();
for(Contact s : [SELECT Id, GPA__c, Career_ Readiness__c
                  FROM Contact
                  WHERE Id IN :studentIds]){
    Integer skills = skillCounts.containsKey(s.Id) ? skillCounts.get(s.Id) : 0;
    Decimal gpa = (s.GPA__c == null) ? 0 : s.GPA__c;
    Decimal readiness = Math.min(100, (gpa * 8) + (skills * 4));

    // Only update if value has actually changed
    if(s.Career_ Readiness__c != readiness){
        updates.add(new Contact(Id = s.Id, Career_ Readiness__c = readiness
    );
    }
}

if(!updates.isEmpty()) update updates;
}
}

```

The screenshot shows the Apex Class Detail page for the 'StudentCareerService' class. The page includes the following details:

- Apex Class:** StudentCareerService
- Name:** StudentCareerService
- Namespace Prefix:** (None)
- Status:** Active
- Code Coverage:** 0% (0/24)
- Created By:** Swayam Tamrakar, 9/19/2025, 2:03 AM
- Last Modified By:** Swayam Tamrakar, 9/20/2025, 10:23 AM
- Help for this Page:** (link)

The code editor displays the following Apex code:

```

1 public with sharing class StudentCareerService {
2     public static void updateReadiness(Map<Id, Contact> newContactsMap) {
3         if (newContactsMap == null || newContactsMap.isEmpty()) return;
4
5         Set<Id> studentIds = new Set<Id>();
6         for(Contact c : newContactsMap.values()){
7             // adjust 'Student' to your actual RecordType DeveloperName
8             if (c.RecordTypeId != null &&
9                 Schema.SObjectType.Contact.getRecordTypeInfoById(
10                     .get(c.RecordTypeId)
11                     .getDeveloperName() == 'Student') {
12                         studentIds.add(c.Id);
13                     }
14                 }
15             }

```

## 2. Create the Trigger (ContactTrigger)

- **Developer Console → File → New → Apex Trigger.**
- **Object:** Contact. **Name:** ContactTrigger.

- **Code:**

```

trigger ContactTrigger on Contact (before insert, before update, after insert, after update, after delete) {
    if (Trigger.isBefore) {
        ContactTriggerHandler.before(Trigger.new, Trigger.oldMap);
    }
    if (Trigger.isAfter) {
        ContactTriggerHandler.after(Trigger.newMap, Trigger.oldMap);
    }
    if (Trigger.isDelete) {
        ContactTriggerHandler.afterDelete(Trigger.oldMap);
    }
}

```

### 3. Create the Test Class

- Developer Console → **File** → **New** → **Apex Class**.
- **Name:** StudentCareerServiceTest.
- **Code:**

```

@isTest
private class StudentCareerServiceTest {

    // ◆ Test Setup - reusable data
    @testSetup
    static void setup(){
        // Create College (Account) for Student
        Account college = new Account(Name = 'Test College');
        insert college;
    }
}

```

```

// Create Company (Account) for Placement
Account company = new Account(Name = 'TechCorp Pvt Ltd');
insert company;

// Get Student record type
Id studentRtId = Schema.SObjectType.Contact.getRecordTypeInfosByName()
    .get('Student').getRecordTypeId();

// Dynamically get a valid Placement_Status__c picklist value (Contact)
Schema.DescribeFieldResult placementStatusField = Contact.Placement_Status__
_c.getDescribe();
String validPlacementStatus = placementStatusField.getPicklistValues()[0].getValue();

// Create Student
Contact stud = new Contact(
    LastName = 'TestStudent',
    FirstName = 'Unit',
    AccountId = college.Id,
    GPA__c = 7.5,
    RecordTypeId = studentRtId,
    Enrollment_Year__c = 2025,
    Placement_Status__c = validPlacementStatus
);
insert stud;

// Dynamically get valid Category__c and Proficiency_Level__c for Skill
Schema.DescribeFieldResult categoryField = Skill__c.Category__c.getDescribe();
String validCategory = categoryField.getPicklistValues()[0].getValue();

Schema.DescribeFieldResult proficiencyLevelField = Skill__c.Proficiency_Level__
_c.getDescribe();
String validProficiencyLevel = proficiencyLevelField.getPicklistValues()[0].getValue();

// Create Skill
Skill__c skill = new Skill__c(
    Name = 'Apex Programming',
    Category__c = validCategory,

```

```

        Proficiency_Level__c = validProficiencyLevel,
        Skill_Level__c = 'Beginner'
    );
    insert skill;

    // Dynamically get a valid Proficiency__c value for Student_Skill__c
    Schema.DescribeFieldResult proficiencyField = Student_Skill__c.Proficiency__c.getDescribe();
    String validProficiency = proficiencyField.getPicklistValues()[0].getValue();

    // Link Student with Skill
    Student_Skill__c ss = new Student_Skill__c(
        Student__c = stud.Id,
        Skill__c = skill.Id,
        Proficiency__c = validProficiency
    );
    insert ss;

    // Dynamically get a valid Offer_Status__c value for Placement
    Schema.DescribeFieldResult offerStatusField = Placement__c.Offer_Status__c.getDescribe();
    String validOfferStatus = offerStatusField.getPicklistValues()[0].getValue();

    // Create Placement linked to Student and Company
    Placement__c placement = new Placement__c(
        Name = 'Software Engineer Placement',
        Company__c = company.Id,           //  Required field
        Company_Name__c = company.Name,
        Joining_date__c = Date.today().addMonths(1),
        Offer_Date__c = Date.today(),
        Offer_Package__c = 600000,
        Offer_Status__c = validOfferStatus,
        Package__c = 600000,
        Student__c = stud.Id
    );
    insert placement;
}

// ♦ Test Career Readiness Calculation (Trigger + Service)
@isTest

```

```

static void testCareerReadinessCalculation(){
    Contact stu = [SELECT Id, GPA__c FROM Contact WHERE LastName = 'TestStudent' LIMIT 1];

    // Fire trigger
    stu.GPA__c = 9;
    update stu;

    Contact updatedStu = [SELECT Career_Readyness__c FROM Contact WHERE Id = :stu.Id];
    System.assert(updatedStu.Career_Readyness__c > 0,
        'Career readiness should be calculated.');
}

// ◆ Test API Callout with Mock (Job Posting Service)
@isTest
static void testCalloutWithMockAndFutureMethod(){
    Test.setMock(HttpCalloutMock.class, new MockJobApiResponse());

    Test.startTest();
    JobApiService.fetchJobsAsync(); // assumes you have JobApiService class implemented
    Test.stopTest();

    Integer countJobs = [SELECT COUNT() FROM Job_Post__c];
    System.assert(countJobs >= 0,
        'Job posts should be inserted from mock response');
}

// ◆ Mock API Response for Job Service
private class MockJobApiResponse implements HttpCalloutMock {
    public HTTPResponse respond(HTTPRequest req){
        HttpResponse res = new HttpResponse();
        res.setHeader('Content-Type','application/json');
        res.setBody('['{"id":"123","title":"Intern Software Engineer","company":"TechCorp"}]');
        res.setStatusCode(200);
        return res;
    }
}

```

```
}
```

#### 4. Run the Test

- In Developer Console → **Test** → **New Run**.
- Select StudentCareerServiceTest.
- Run it.
- Expected Result: Test passes, Coverage shows green for StudentCareerService and ContactTrigger.

#### 5. Verify It Works with Real Data

- In App Launcher → Contacts → New.
- Record Type: Student
- Enter GPA = 7.
- Create a Skill (App Launcher → Skills → New).
- Create Student\_Skill (App Launcher → Student Skills → New → link Student + Skill).
- Go back to Student record → refresh → you should see Career Readiness field updated.

#### ➤ 5.2 Add Supporting Apex Classes

- Repeat **Setup** → **Apex Classes** → **New** for each:

##### 1. Batch Apex

- **Code:**

```
global class JobPostingBatch implements Database.Batchable<sObject>, Database.Stateful {
```

```
global Database.QueryLocator start(Database.BatchableContext bc){
    // Fetch all Accounts
    return Database.getQueryLocator([SELECT Id, Name FROM Account]);
}

global void execute(Database.BatchableContext bc, List<sObject> scope){
    List<Account> accounts = (List<Account>) scope;
    System.debug('Processing Accounts: ' + accounts);

    List<Job_Post__c> jobs = new List<Job_Post__c>();
    for(Account a : accounts){
        jobs.add(new Job_Post__c(
            Name = 'Job for ' + a.Name,
            Company__c = a.Id, // relates Job Post to Account
            Job_Title__c = 'Software Intern',
            Location__c = 'Remote'
        ));
    }
    if(!jobs.isEmpty()) insert jobs;
}

global void finish(Database.BatchableContext bc){
    System.debug('Batch Finished Successfully');
}
```

}

The screenshot shows the Apex Class Detail page for the class 'JobPostingBatch'. The page has a header with 'SETUP' and a gear icon. Below the header, the class name 'JobPostingBatch' is displayed. The main content area shows the 'Apex Class Detail' section with tabs for 'Class Body', 'Class Summary', 'Version Settings', and 'Trace Flags'. The 'Class Body' tab is selected, showing the following code:

```
1 global class JobPostingBatch implements Database.Batchable<sObject>, Database.Stateful {
2     global Database.BatchableContext start(Database.BatchableContext bc){
3         // Fetch all Accounts
4         return Database.getQueryLocator([SELECT Id, Name FROM Account]);
5     }
6     global void execute(Database.BatchableContext bc, List<sObject> scope){
7         List<Account> accounts = (List<Account>) scope;
8         System.debug('Processing Accounts: ' + accounts);
9         List<Job_Post__c> jobs = new List<Job_Post__c>();
10        for(Account a : accounts){
11            for(Job_Post__c j : a.Job_Post__r){
12                jobs.add(new Job_Post__c{
13                    Name = 'Job for ' + a.Name,
14                    Job_Type__c = 'Software Intern',
15                    Job_Title__c = 'Software Intern',
16                    Location__c = 'Remote'
17                });
18            }
19        }
20        if(!jobs.isEmpty()) insert jobs;
21    }
22    global void finish(Database.BatchableContext bc){
23        System.debug('Batch Finished Successfully');
24    }
25 }
```

## 2. Queueable Apex

- **Code:**

```
public class ReadinessQueueable implements Queueable {  
    private Id studentId;  
    public ReadinessQueueable(Id studentId){ this.studentId = studentId; }  
    public void execute(QueueableContext context){  
        Contact stu = [SELECT Id, GPA__c FROM Contact WHERE Id = :studentId LIMIT 1];  
        Integer skills = [SELECT COUNT() FROM Student_Skill__c WHERE Student__c = :studentId];  
        Decimal readiness = Math.min(100, (stu.GPA__c * 8) + (skills * 4));  
        stu.Career_Readiness__c = readiness;  
        update stu;  
    }  
}
```

}

The screenshot shows the Salesforce Apex Classes page. At the top, there's a header with a gear icon labeled "SETUP" and "Apex Classes". Below the header, the page title is "ReadinessQueueable". There are tabs for "Apex Class Detail", "Class Body", "Class Summary", "Version Settings", and "Trace Flags". The "Apex Class Detail" tab is selected, showing details like Name: ReadinessQueueable, Namespace Prefix: (empty), Created By: Swayam Tamrakar, Created Date: 9/19/2025, 11:14 AM, Status: Active, and Code Coverage: 0% (0/7). The "Last Modified By" and "Last Modified Date" fields also show Swayam Tamrakar and 9/19/2025, 11:14 AM. The "Class Body" tab is active, displaying the following Apex code:

```
1 public class ReadinessQueueable implements Queueable {
2     private Id studentId;
3     public ReadinessQueueable(Id studentId) {this.studentId = studentId;}
4     public void execute(QueueableContext context){
5         Contact stu = [SELECT Id, GPA__c FROM Contact WHERE Id = :studentId LIMIT 1];
6         Integer skills = [SELECT COUNT() FROM Student_Skill__c WHERE Student__c = :studentId];
7         Decimal readiness = Math.min(100, (stu.GPA__c * 8) + (skills * 4));
8         stu.Career_Readyiness__c = readiness;
9         update stu;
10    }
11 }
```

### 3. Scheduled Apex

- **Code:**

```
global class JobSyncScheduler implements Schedulable {
    global void execute(SchedulableContext sc){
        Database.executeBatch(new JobPostingBatch(), 100);
    }
}
```

- **Run in Execute Anonymous** (Developer Console → Debug → Open Execute Anonymous):

```
System.schedule('Nightly Job Sync', '0 0 23 * * ?', new
JobSyncScheduler());
```

The screenshot shows the Salesforce Developer Console with the 'Execution Log' tab selected. The log output is as follows:

```

```

## 4. Future Method

- Code:**

```
public class StudentNotifier {
    @future(callout=false)
    public static void sendPlacementNotification(Id studentId){
        Contact stu = [SELECT Id, Email, LastName FROM Contact WHERE Id
        = :studentId LIMIT 1];
        Messaging.SingleEmailMessage mail = new Messaging.SingleEmailMe
        ssage();
        mail.setToAddresses(new String[] {stu.Email});
        mail.setSubject('Placement Update');
        mail.setPlainTextBody('Hello ' + stu.LastName + ', your placement status
        has been updated.');
        Messaging.sendEmail(new Messaging.SingleEmailMessage[] { mail });
    }
}
```

The screenshot shows the Apex Classes page in Salesforce. The class is named "StudentNotifier". The code body contains the following Apex code:

```

1 public class StudentNotifier {
2     @future(callout=false)
3     public void sendPlacementNotification(Id studentId){
4         Student stu = [SELECT Id, Email, LastName FROM Contact WHERE Id = :studentId];
5         Messaging.SingleEmailMessage mail = new Messaging.SingleEmailMessage();
6         mail.setToAddresses(new String[]{stu.Email});
7         mail.setSubject('Placement Update');
8         mail.setPlainTextBody('Hello ' + stu.LastName + ', your placement status has been updated.');
9         Messaging.sendEmail(new Messaging.SingleEmailMessage[] { mail });
10    }
11 }

```

## 5. SOSL

- Code:**

```

public class StudentSearchService {
    @AuraEnabled(cacheable=true)
    public static List<Contact> searchStudents(String keyword){
        List<List<SObject>> results = [FIND :keyword IN ALL FIELDS RETURNING Contact(Id, Name, Email WHERE RecordType.Name = 'Student' LIMIT 20)];
        return (List<Contact>) results[0];
    }
}

```

The screenshot shows the Apex Classes page in Salesforce. The class is named "StudentSearchService". The code body contains the following Apex code:

```

1 public class StudentSearchService {
2     @AuraEnabled(cacheable=true)
3     public static List<Contact> searchStudents(String keyword){
4         List<List<SObject>> results = [FIND :keyword IN ALL FIELDS RETURNING Contact(Id, Name, Email WHERE RecordType.Name = 'Student' LIMIT 20)];
5         return (List<Contact>) results[0];
6     }
7 }

```

## 6. SOSL

- **Code:**

```
public class SafeUpdateService {  
    public static void safeUpdate(List<Contact> students){  
        try {  
            update students;  
        } catch(DmlException dmlEx){  
            System.debug('DML failed: ' + dmlEx.getMessage());  
        } catch(Exception e){  
            System.debug('Unexpected error: ' + e.getMessage());  
        }  
    }  
}
```

The screenshot shows the Salesforce Apex Classes page. At the top, there's a header with 'SETUP' and 'Apex Classes'. Below it, a sub-header says 'Apex Class' and 'SafeUpdateService'. The main area is titled 'Apex Class Detail' with tabs for 'Class Body', 'Class Summary', 'Version Settings', and 'Trace Flags'. The 'Class Body' tab is selected, displaying the Apex code for the SafeUpdateService class. The code is identical to the one shown in the previous text block. Above the code, there's a table with columns for 'Name' (SafeUpdateService), 'Namespace Prefix' (empty), 'Created By' (Swayam Tamrakar), 'Last Modified By' (Swayam Tamrakar), 'Status' (Active), and 'Code Coverage' (0% / 0/5). Below the code, there are buttons for 'Edit', 'Delete', 'Download', 'Security', and 'Show Dependencies'.

## 7. Job ApiService

- **Code:**

```
public with sharing class Job ApiService {  
    @future(callout=true)
```

```

public static void fetchJobsAsync(){
    HttpRequest req = new HttpRequest();
    req.setEndpoint('callout:MyJobAPI/v1/jobs'); // Requires Named
    Credential: MyJobAPI
    req.setMethod('GET');
    Http http = new Http();
    HttpResponse res = http.send(req);

    if(res.getStatusCode() == 200){
        List<Object> jobs = (List<Object>)
        JSON.deserializeUntyped(res.getBody());
        List<Job_Post__c> inserts = new List<Job_Post__c>();

        for(Object o : jobs){
            Map<String, Object> jobMap = (Map<String, Object>) o;

            inserts.add(new Job_Post__c(
                //  Required Fields
                Name = (String) jobMap.get('title'), // Record Name
                Job_Title__c = (String) jobMap.get('title'), // Required
                Job_Post__c = jobMap.containsKey('id')
                    ? 'API-' + String.valueOf(jobMap.get('id'))
                    : 'API-' + String.valueOf(Crypto.getRandomInteger()), //
                Required unique identifier
                Deadline__c = Date.today().addDays(30), // Required
                field

                //  Optional Fields
                Title__c = (String) jobMap.get('title'),
                Location__c = jobMap.containsKey('location') ? (String)
                jobMap.get('location') : null
            ));
        }
    }
}

```

```

        });
    }

    if(!inserts.isEmpty()) insert inserts;
}
}
}

```

The screenshot shows the Salesforce Apex Classes page for the 'JobApiService' class. The page has a header with 'SETUP' and 'Apex Classes'. Below the header, it says 'Apex Class' and 'JobApiService'. There are tabs for 'Edit', 'Delete', 'Download', 'Security', and 'Show Dependencies'. The 'Status' is 'Active' and 'Code Coverage' is '95% (20/21)'. The 'Created By' is 'Swayam Tamrakar' at '9/19/2025, 2:28 AM' and 'Last Modified By' is 'Swayam Tamrakar' at '9/20/2025, 11:28 AM'. The 'Class Body' tab is selected, showing the Apex code:

```

1  public with sharing class JobApiService {
2      @future(callout=true)
